

# COLOR

for architectural  
metal fabrics

## **Powder Coating**

Powder coating is one way we can add color to our metal fabrics. Fusing dry powder to the surface of metal via an electrostatic charge, powder coating creates a smooth and durable finish that's ideally suited for exterior environments. GKD can provide a range of powders in a near limitless range of colors to accommodate your specific performance requirements and aesthetic needs.

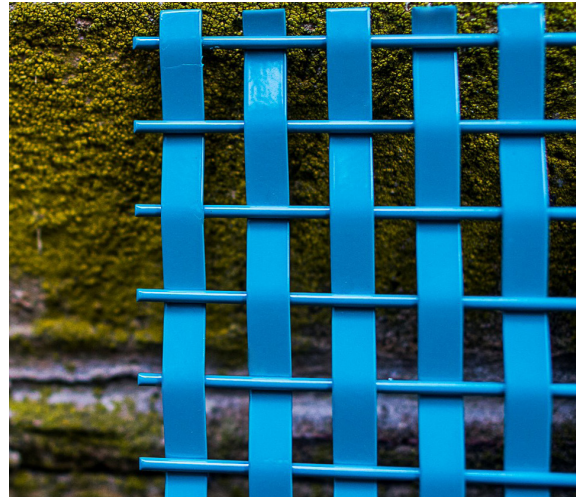

## **High Performance Coating**

With our in-house paint mixing system and color matching capabilities, we can create virtually any custom color with our HD performance coatings. Durable, long-lasting, and available in a variety of finishes, we can paint solids, graphics, and patterns in a controlled environment for maximum quality.

*Standard Colors*

*Metallic Colors*

# ANODIZING

for architectural  
metal fabrics

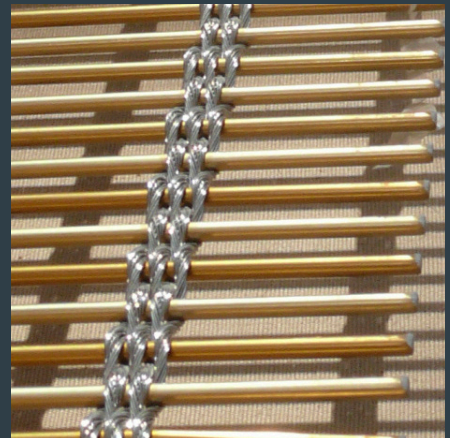

## Anodizing

GKD's aluminum meshes are offered in a range of anodized colors so each decorative design pattern is greatly enhanced. This surface coloration method provides a durable protection against environmental influences such as UV radiation, temperature deviations or mechanical effects and overall corrosion. We offer 12 different colors and in a variety of mesh styles.
